## Задание по YARN

- 1. Подключитесь к Jupyter Notebook.
- 2. Создайте Spark сессию.

```
[2]: from pyspark.sql import SparkSession
      from pyspark.sql.types import *
      import pyspark.sql.functions as f
      import os
      os.environ['HADOOP_CONF_DIR'] = '/etc/hadoop/conf'
      os.environ['YARN_CONF_DIR'] = '/etc/hadoop/conf'
              SparkSession.builder
               .config("spark.ui.port", 18188)
               .config("spark.driver.memory", "512m")
               .config("spark.executor.instances", "2")
               .config("spark.executor.cores", "1")
               .appName('kp_test_df_yarn')
                .master('yarn')
                .getOrCreate()
      Setting default log level to "WARN".
      To adjust logging level use sc.setLogLevel(newLevel). For SparkR, use setLogLevel(newLevel).
      24/01/26 16:46:04 WARN NativeCodeLoader: Unable to load native-hadoop library for your platform... using builtin-java classes where applicable 24/01/26 16:46:06 WARN Utils: Service 'SparkUI' could not bind on port 18188. Attempting port 18189.
      24/01/26 16:46:07 WARN DomainSocketFactory: The short-circuit local reads feature cannot be used because libhadoop cannot be loaded.
      24/01/26 16:46:07 WARN Client: Neither spark.yarn.jars nor spark.yarn.archive is set, falling back to uploading libraries under SPARK_HOME.
```

3. При помощи spark.sql выполните пару запросов, например, выведите список баз данных, список таблиц в базе. Сделайте заведомо неправильный запрос (например, попробуйте выбрать данные из несуществующей таблицы).

```
[5]: spark.catalog.listDatabases()
 [5]: [Database(name='default', catalog='spark_catalog', description='default database', locationUri='file:/home/sbb_student_10/spark-warehouse')]
 [6]: spark.catalog.listTables('default')
 [6]: []
[8]: spark.sql('''select * from default''')
      AnalysisException
                                                  Traceback (most recent call last)
      Cell In[8], line 1

```

4. Откройте интерфейс YARN, найдите свое задание Spark (по имени пользователя) и скопируйте ее номер (вида application\_xxxxxxxxx\_yyyyyyy). Обратите внимание на название очереди, в которой запустилось задание. Сделайте скриншот и сохраните его в своей домашней папке.

- 5. B Jupyter Notebook откройте терминал.
- 6. Выведите список всех заданий YARN, найдите среди них свое. (Подсказка, можно использовать команду linux grep для поиска)
- 7. Выведите лог своего задания только по строчкам, где есть слово Error. Сохраните результаты локально в файл в своей домашней директории.
